PROFESSIONAL SUMMARY

Product-focused B.Tech Computer Science student passionate about building user-centric products and solving real problems through structured product thinking. Through self-driven projects, product teardowns, and web applications, I have explored user research, competitive analysis, feature prioritization, and product strategy. Currently building a Product Teardown Lab and writing on *Product & Perspective* while strengthening my technical foundation alongside product management skills.

SKILLS

Product Management

- Product Teardowns
- User Research
- Competitive Analysis
- User Stories
- PRD Basics
- Product Strategy Fundamentals

Technical

- HTML, CSS, JavaScript
- React (Working Knowledge)
- TypeScript (Working knowledge)
- Git & GitHub
- REST APIs
- Basic C++

Tools

- Figma | Basic Prototyping
- Jira | Basic Agile Practices
- Notion | Documentation
- Wireframing & User Flows
- AI-Assisted Workflows

PROJECTS

SusWord — Real-Time Multiplayer Social Deduction Game | React · TypeScript · Socket.IO · Node.js

- Owned full product lifecycle: defined game mechanics PRD, designed a 5-phase state machine (lobby → word assign → discussion → vote → result), and shipped a live multiplayer product for 3–8 players.
- Identified core engagement drop-off between rounds; designed imposter role mechanics to sustain tension and designed imposter role mechanics intended to improve session retention.
- Wrote Socket.IO event model, backend schema, and phased implementation roadmap across 4 milestones.

HabitMetric — Productivity & Habit Management Platform | React · JavaScript · Tailwind CSS

- Defined product requirements around habit recurrence, streak tracking, and progress visualization — translating user pain points into a prioritized feature set with a zero-login UX.
- Designed a persistent browser-storage workflow to reduce repetitive task entry and simplify daily planning through a clean interface and persistent browser-storage workflow tracking.

PM Portfolio Website & Blog | React · TypeScript · Framer Motion · Three.js and AI-assisted development.

- Published structured teardowns of Duolingo, Blinkit, and Spotify analyzing retention mechanics, monetization, and UX decisions; each teardown includes improvement hypotheses with success metrics.
- Developed a 30-60-90 day growth strategy for a Founder's Office internship assignment, including user segmentation, acquisition experiments, KPIs, and scaling recommendations.

PRODUCT THINKING & RESEARCH

Product Teardown Lab (Ongoing) — productandperspective.blogspot.com

- Publishing structured product teardowns of products such as Duolingo, Blinkit, Spotify, WhatsApp, and Instagram, analyzing user journeys, core loops, monetization strategies, growth levers, and UX decisions from a product management perspective.
- Following a consistent framework for every teardown: first impressions, user journey analysis, feature mechanics, business impact, competitor observations, and three improvement hypotheses supported by measurable success metrics.

EDUCATION

Ajay Kumar Garg Engineering College (AKGEC) — B.Tech Computer Science | Expected 2027 | CGPA: 8.24 / 10

Class 12 (CISCE): 80.40% | Class 10 (ICSE): 82.70%
